

The NicoBloc Challenge

The Side Effects of Nicotine

Most people believe that nicotine is harmless and just gives the smoker a pleasurable feeling as well as being addictive.

However, nicotine is a very potent poison and is used commercially as a weed killer and insecticide. The nicotine from just 6 cigarettes if injected could kill an adult. The incidence of nicotine poisoning reported to Poison Control Centres has increased 20 times since the introduction of electronic cigarettes.

Nicotine can affect every part of the body.
